Agenda

Maturity Model for leveraging Teams, SharePoint, Email and OneDrive

Teams First Information Architecture: Overview

Implementation Phase I: Information Gathering

Implementation Phase II: Teams First Migration Planning

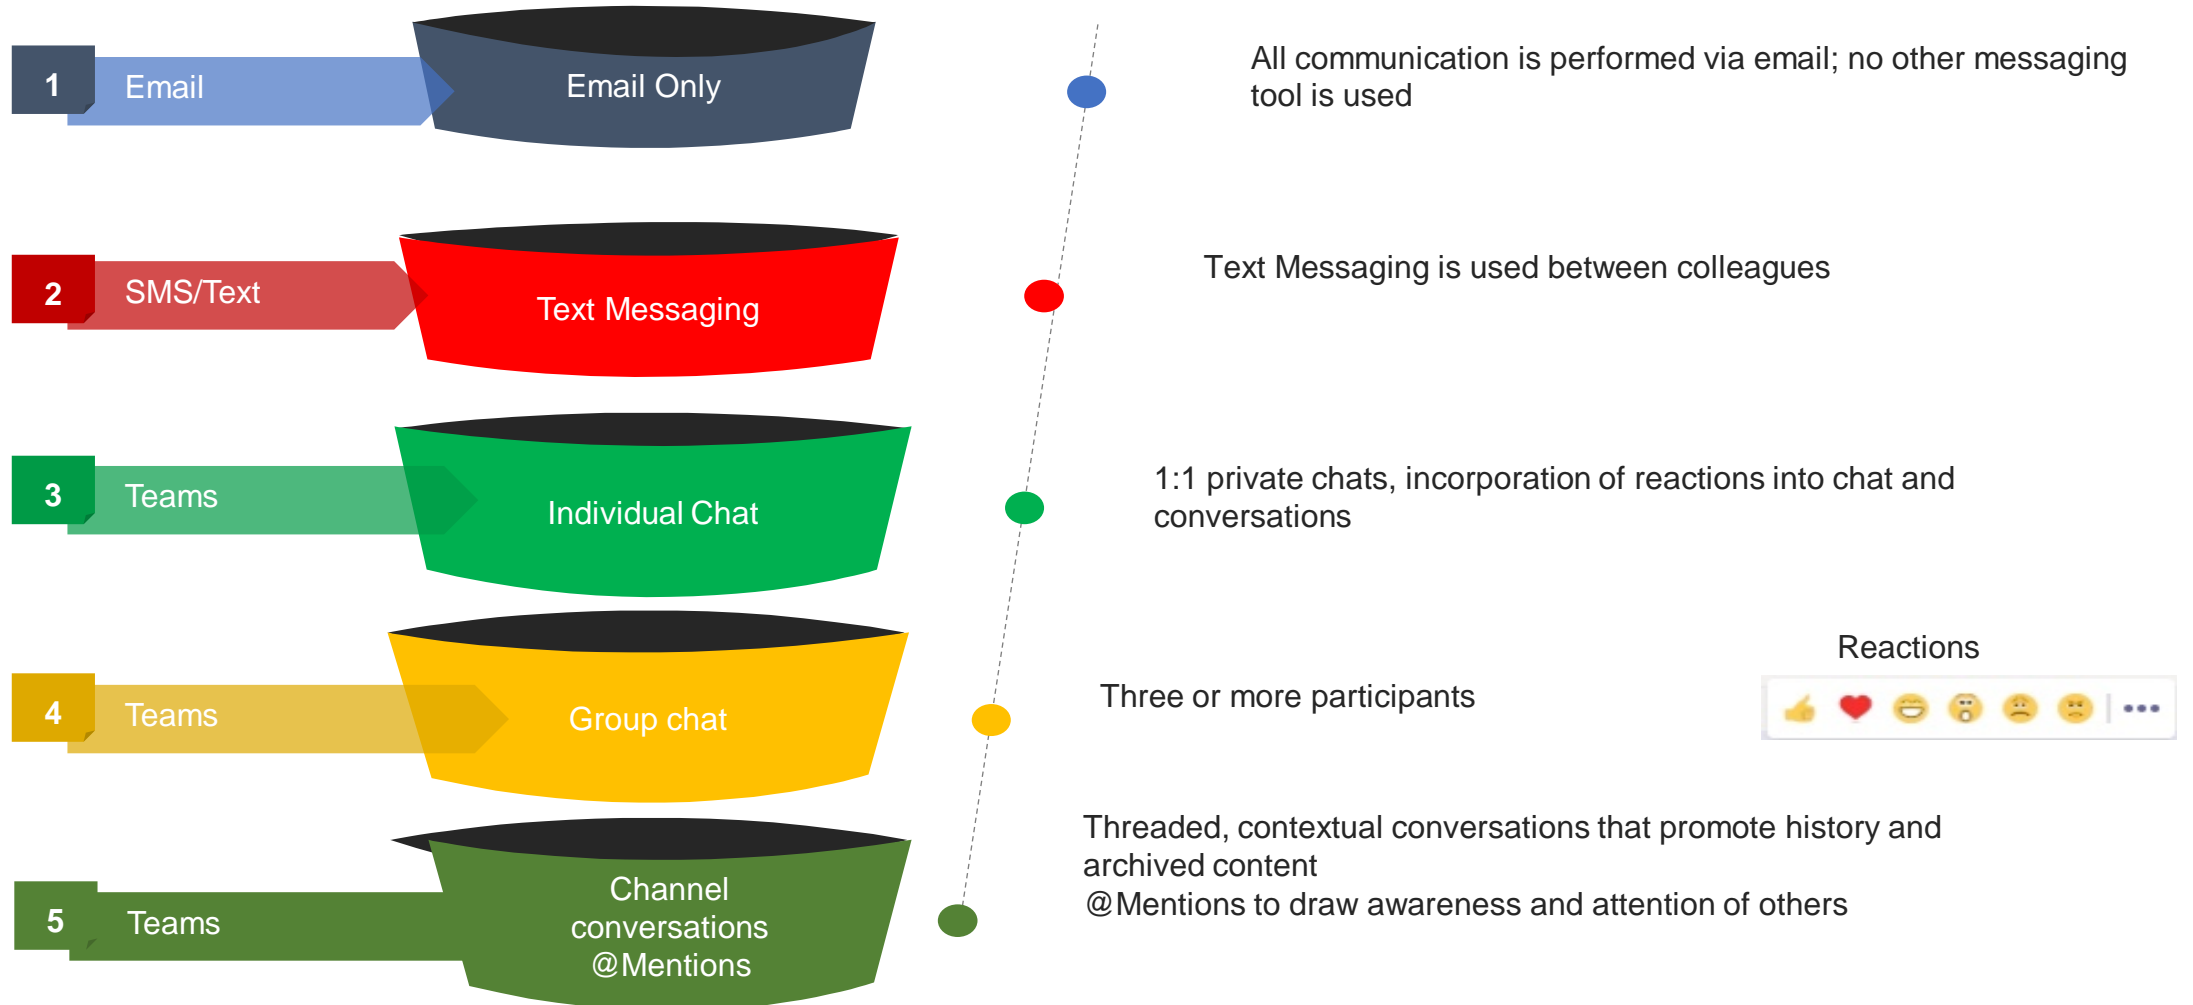

Open-Source and Commercial Solutions for IA Migration

Purview Data Management and Information Protection

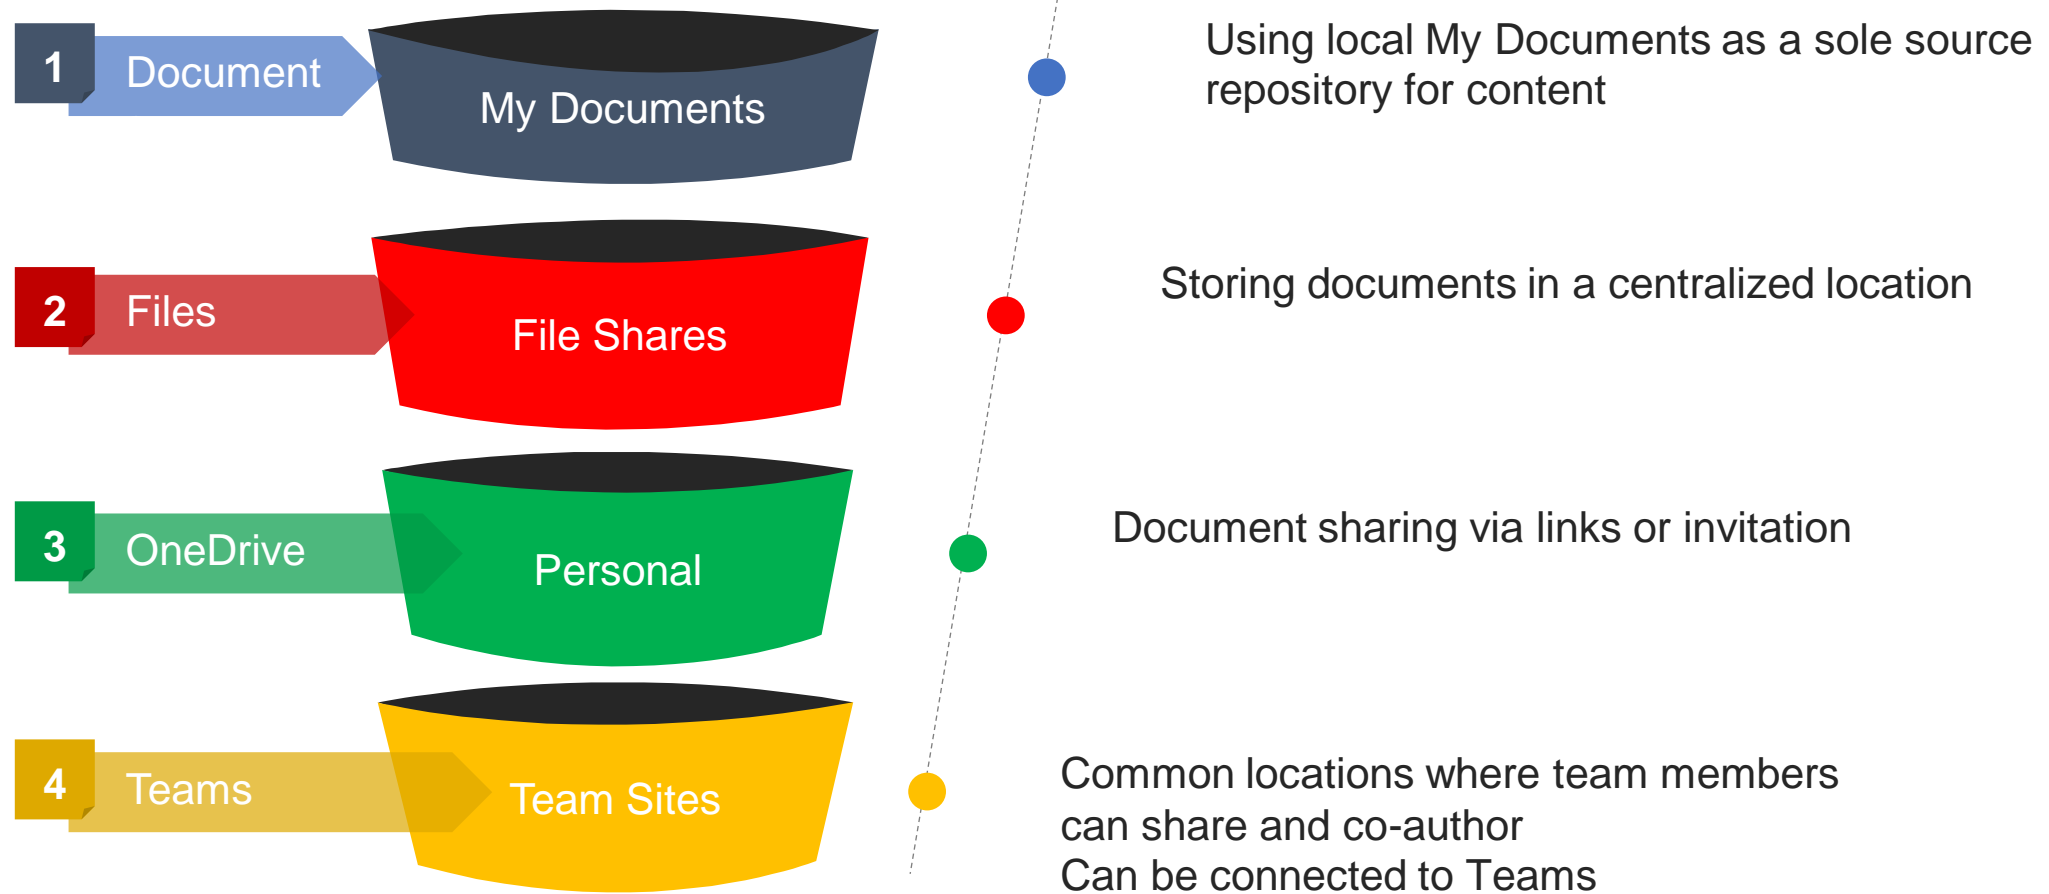

Closing and Q&A

Maturity Model for Leveraging Teams, SharePoint, Email and OneDrive

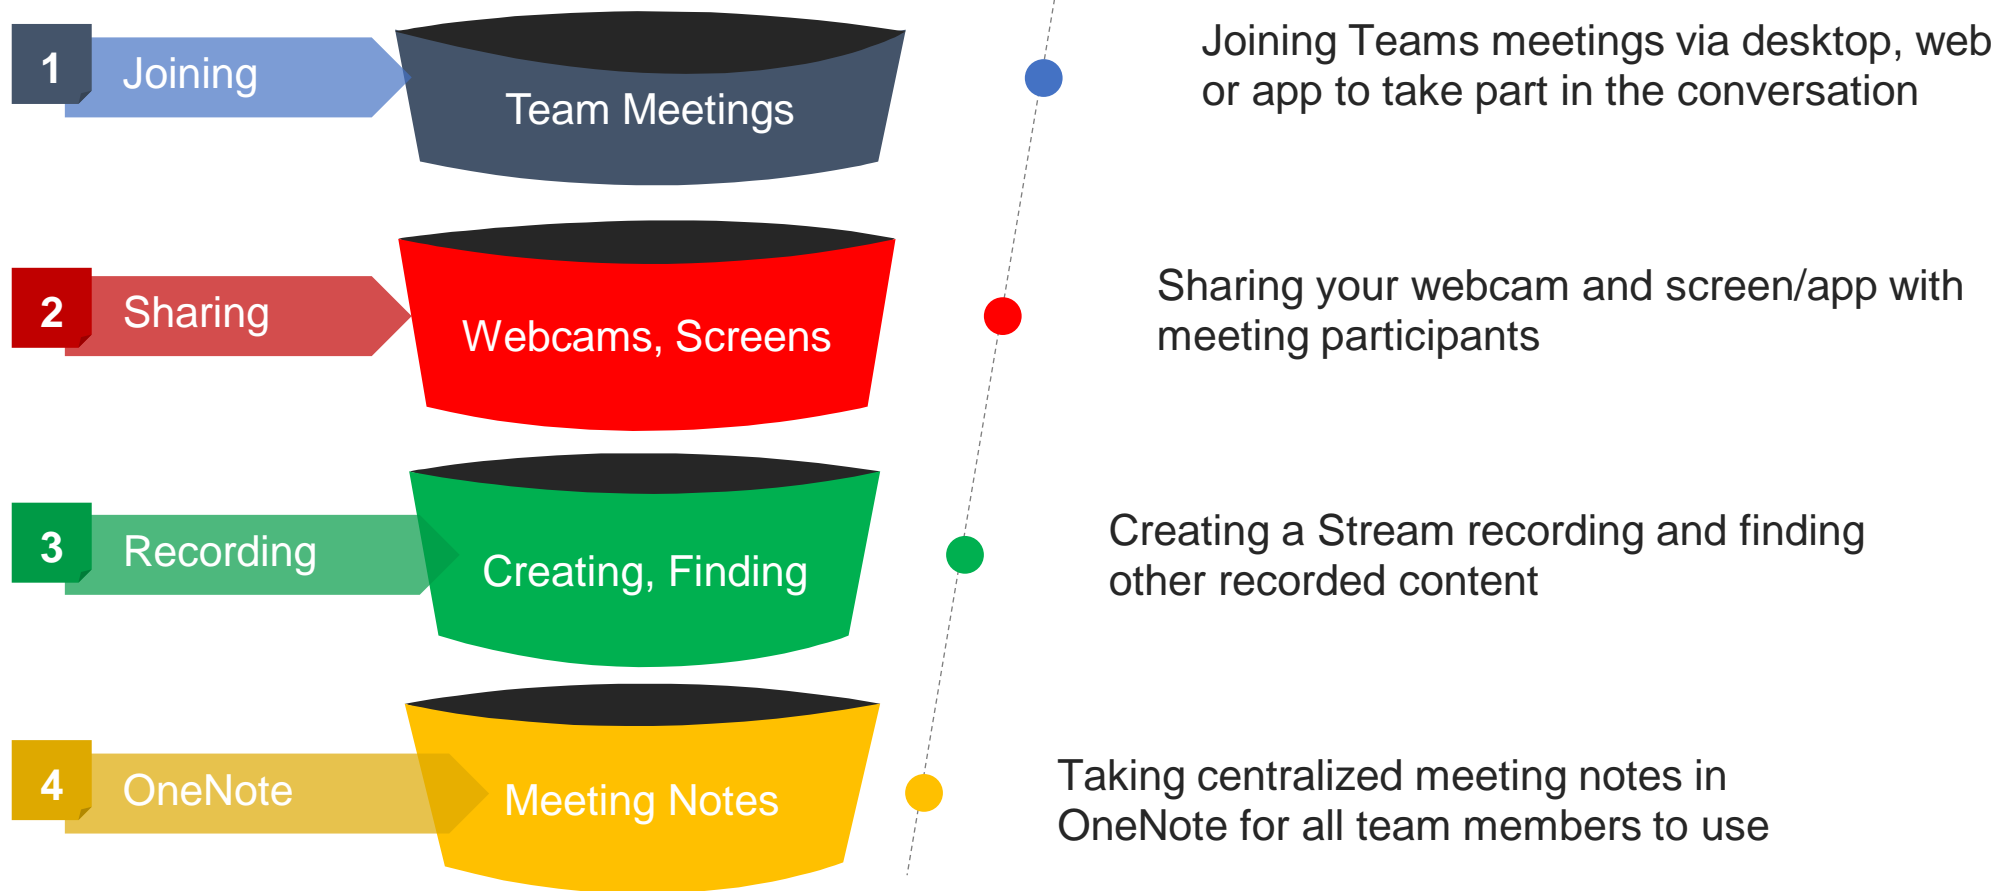

Scenario 1 - Communications

Scenario 2 - Documents

Scenario 3 - Meetings

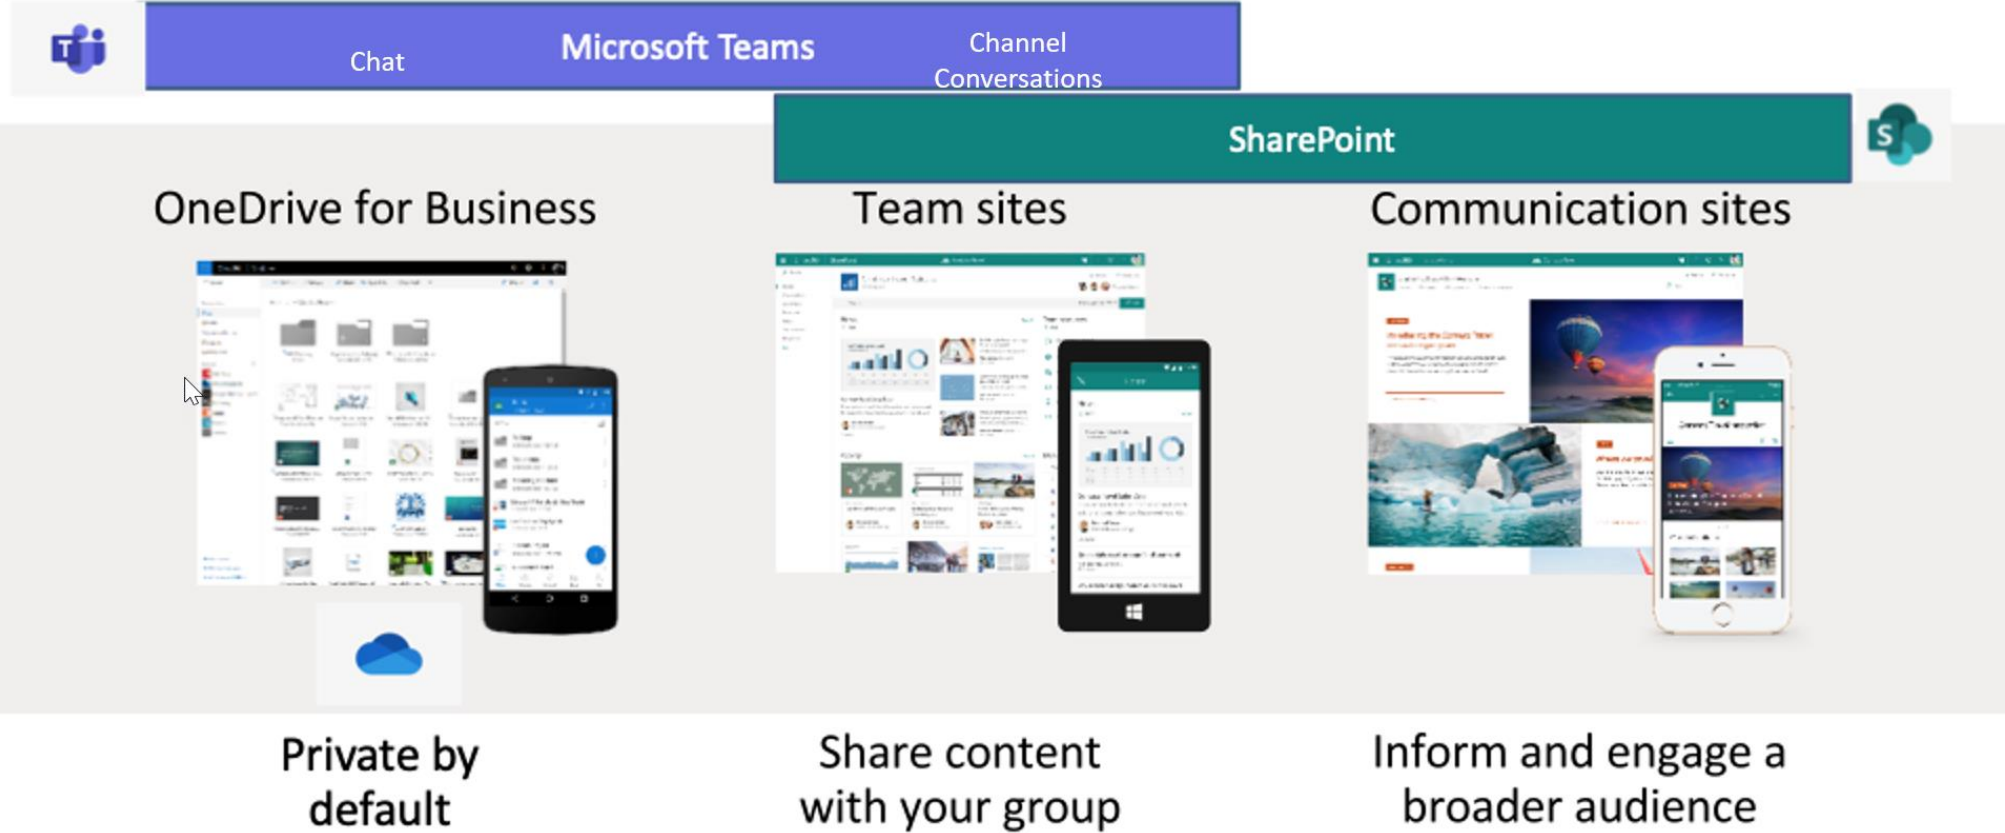

SharePoint Online

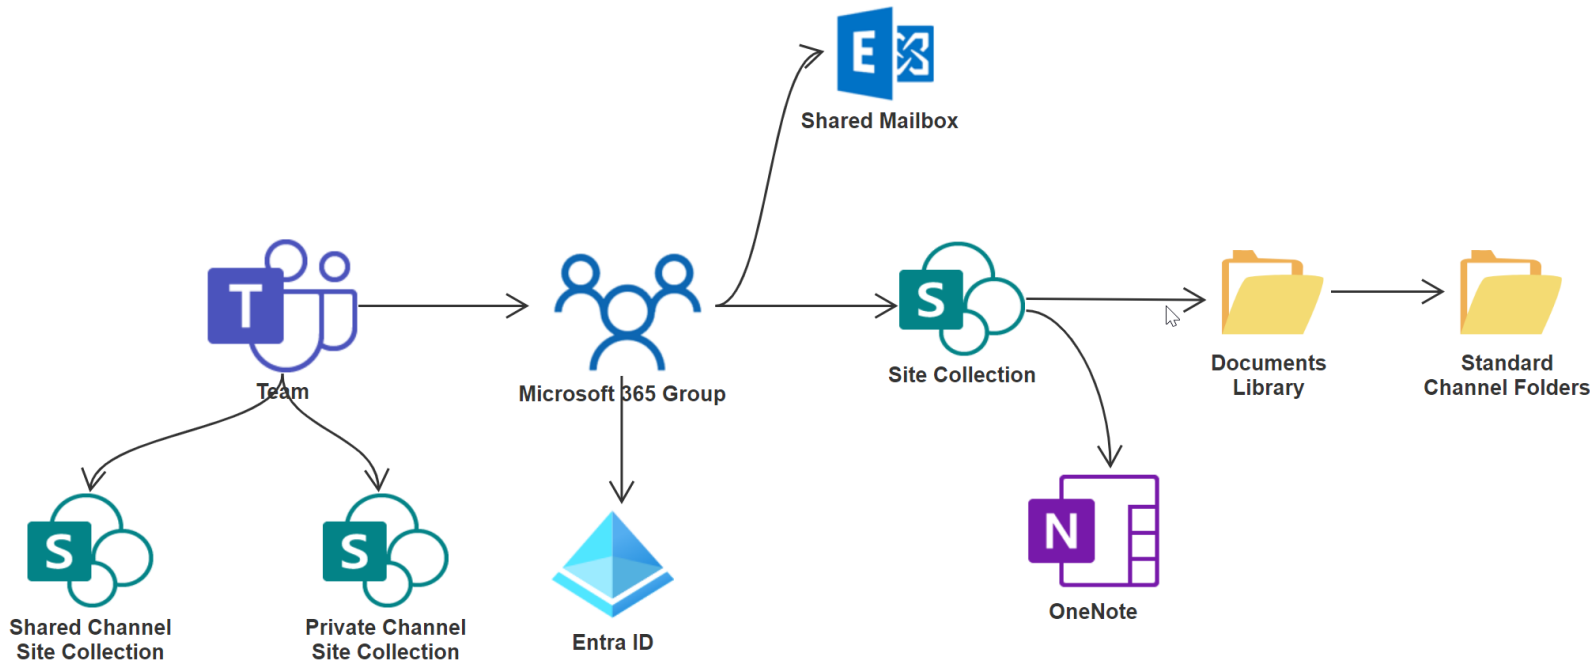

- Single version of truth
- Document and Records Repository for the Organization
 - Eliminate shadow IT (Dropbox, Box, etc.)
 - Decommission on-premises File Share servers
- Communicate and Collaborate
- Corporate Intranet
- Team Sites
- Forms and Workflows

Three Places to Work

Teams Architecture

- **Microsoft 365 Group:** central hub for user identity and permissions
- **Shared Mailbox:** receives communications related to the Team/Site Collections
- **Document Library:** central repository for files that feed into Standard Channel folders
- **OneNote:** used for shared note-taking, accessible within Teams

Folders, Document Sets, Metadata

- Teams encourages folders
- Teams also now supports rich metadata and views
- Document sets can be used to simplify assigning metadata
- Additional metadata can be set at the document level
- Folders can still be used

Steps for Implementing Teams First Information Architecture

Teams First IA Overview

- Microsoft Teams doesn't need to be first on the roadmap
 - These days it is usually already there
- Teams defines the top of the SharePoint Online information architecture
 - Teams → Teams Sites
 - Channels → Folders in Documents library or separate Team Sites

Steps:

- Building the IA to support Teams and planning the migration
- Migrate from file shares, SharePoint Online, etc. into this IA
- Clean up an existing Teams mess
- Create a communication and change management plan

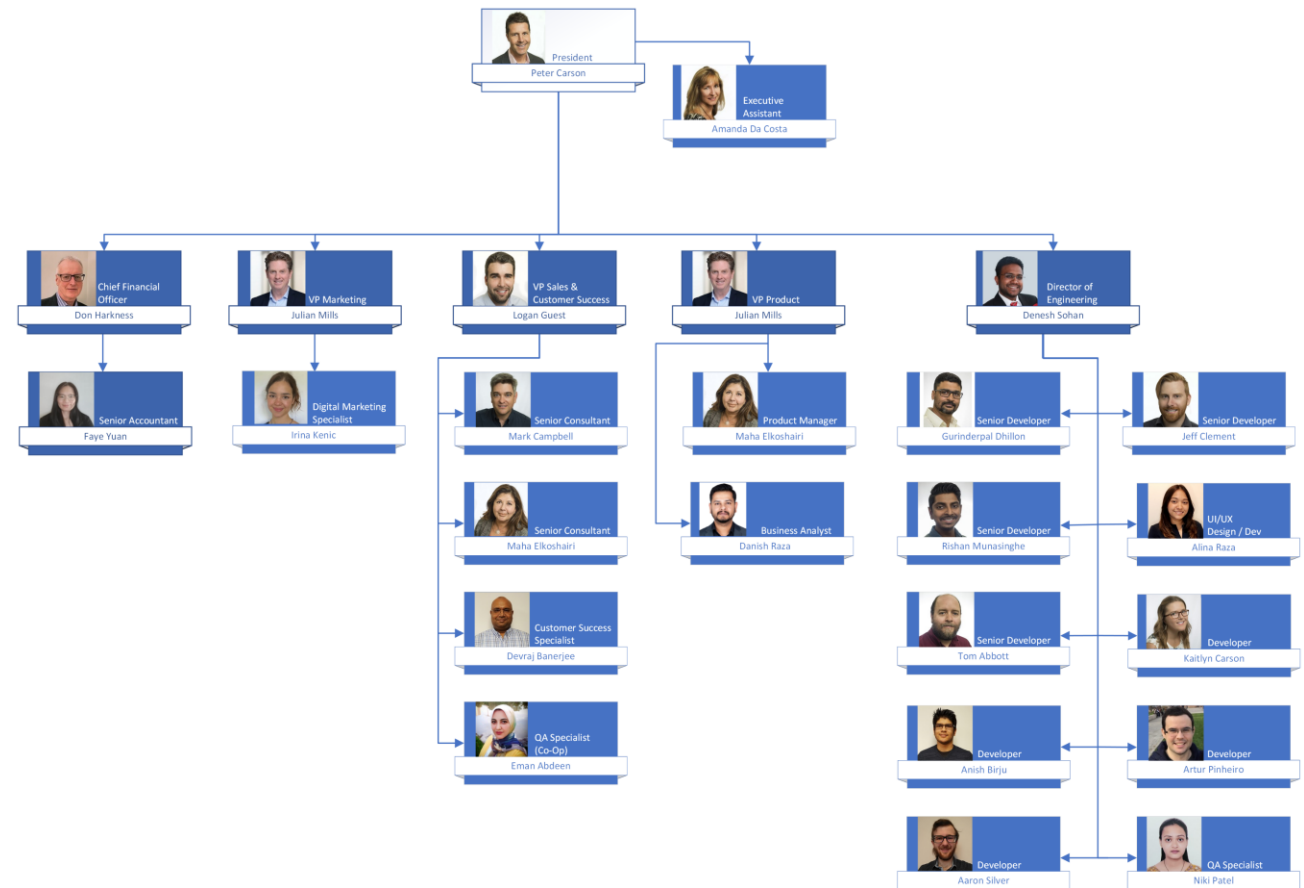

Phase I: Information Gathering

Information Gathering

- The first step is to understand the way your organization works
- Identify operational and department processes that require documentation
 - Current organizational chart **
 - M365 Usage Reports (Teams, Email, Document Management)**
 - Inventory (Teams, SharePoint Sites and Files, File Shares, SaaS, Other)
**
 - Onboarding/Offboarding processes
 - Forms and Workflows

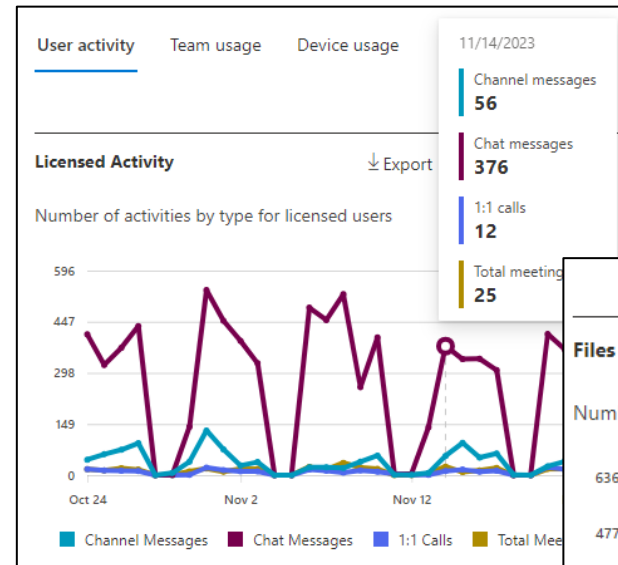

Organizational Chart

- **Why start with your Org Chart?**
 - Maps role-based access controls
 - Pinpoints collaboration hotspots
 - Identifies key communication channels

Microsoft 365 Usage Reports

- Access rich usage reports for licensed users or by activity type
- Available for SharePoint, Teams, and Outlook

Open-Source Inventory Analysis

- Inventory scripts to determine how many files you have in:
 - SharePoint, Teams, File Share
- Output is fed into a Power BI Report to showcase the following:
 - Number of lists and libraries
 - Number of pages
 - Number, sizes, and dates of documents
 - Number of list items

Phase II: Teams First Planning

Consolidate Findings

- Begin planning your Teams-First IA transition
- Identify what Teams and Channels represent in your organization

Example:

Team	Channel	Channel Type
Department	Sub-departments, projects, products, folders	
Client	Project	
Location	Project	
Projects	Phases	
Initiatives		
Committee		

Types of Teams Channels

	Standard Channel	Private Channel	Shared Channel
Teams 	Open to all Team members		Visible only to channel members
SharePoint 	Folder in Team Site collection Documents library All team members have access		New site collection specific to the channel and secured to channel members

B2B Guests vs. Direct Connect in Teams

B2B Guests

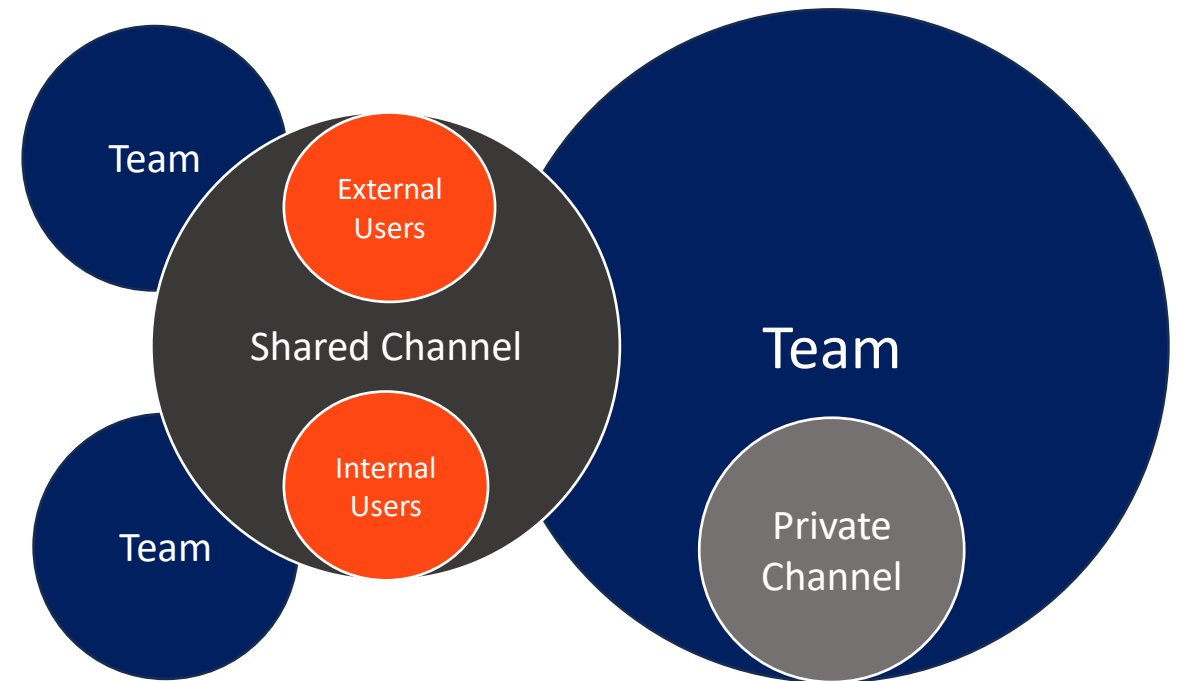

- User exists in the external Team's Azure AD
- All the B2B controls apply
- Guests need to switch their Teams to external tenant
 - Lose their home tenant's Teams, notifications, feeds
- Can use different browser profiles for different tenants
- SharePoint content is easily accessible

B2B Direct Connect

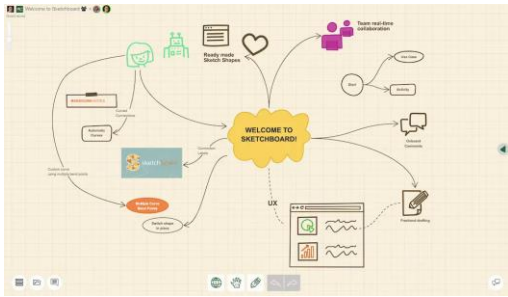

- Needs to be enabled on both tenants
 - More for organization-to-organization sharing
- No tenant switching
- Shared channels appear with all the home Teams and channels
- Also appear in home activity feed
- SharePoint content can only be accessed by Shared Channel members, not B2B guests

Shared vs. Private Channels

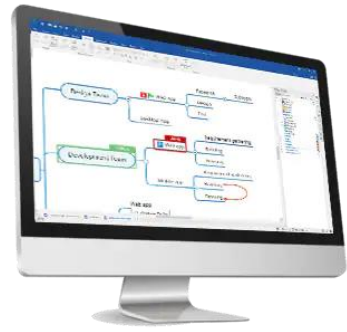

- Both channel styles create a channel site collection for documents
- Both have Teams restrictions on Apps and features
- Private channels let you invite a subset of the parent Team's members
- Shared channels let you invite anyone allowed in the tenant
- Department team that is private to that department
- Outbound connections don't have to be setup for internal

Tools for Planning Your IA

[Sketchboard](#)

[MindManager](#)

Who Needs Access to Your Information?

Users have different permissions levels depending on their job function, licensing, and how they are set up in your tenant.

Review Group Memberships

- Entra ID Groups
- Dynamic Groups
- Import/sync from other systems (such as HRIS)

External Users

- Who are your external stakeholders? How are you provisioning access?

Company Communications

Microsoft Teams

- Ideal for smaller organizations
- Great for on-demand communications
- Anyone can post announcements

Viva Engage

- Ideal for larger organizations
- Create communities for different types of conversations
- More of a social platform than announcement/news

Intranet

- Ideal for medium-large organizations
- Announcements handled by a designated comms/HR team

Advantages of Teams for Company Communications

Increased Engagement

- Teams' interactive platform encourages active participation
- Emails can be easily missed due to high email volume

Streamlined Information Flow

- Organize conversations by topics or projects
- Easier to track and manage discussions

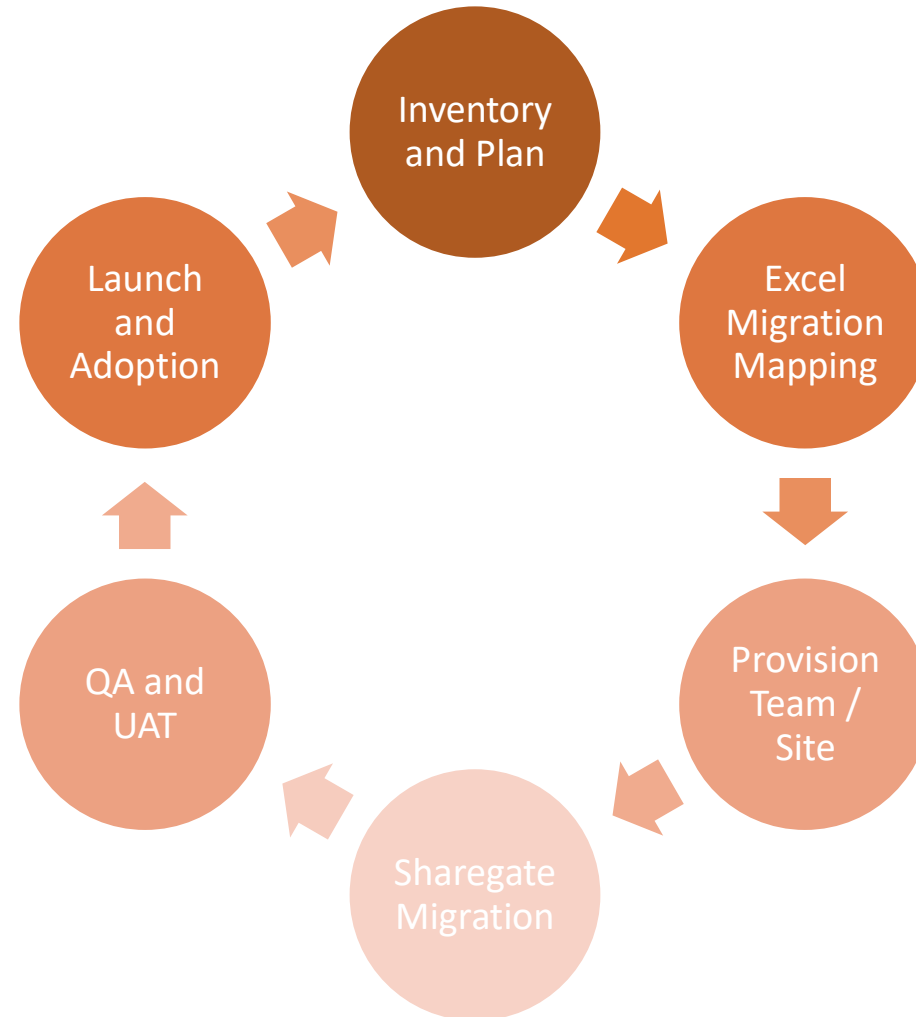

Builds Organizational Knowledge

- History is available to new team members
- Searchable

Migration Planning

Teams First SharePoint Migration

Excel Migration Mapping

- After completing your inventory and planning your migration, need to map where your sites, subsites, folders etc. will be stored.
- Oftentimes, there is a lot of information sprawl which can be consolidated into a Team
- Ex. Teams by Department
 - A Finance Team contains all budgeting, financial planning, statements.

Teams and Sites Provisioning

- Automate the creation of Teams and Sites
- Based on Teams and Sites Templates
- Project Teams
- Department Teams
- Integrate OneNote and Planner in Templates
- Full Lifecycle including retention and deletion

ProvisionPoint

Orchestry

Rencore

ShareGate:

Open-Source Solution

- Effective governance to avoid site sprawl
- Intuitive form for creation of new Team site
- Logic App generates O365 Group
 - SharePoint Site including OneNote
 - Exchange calendar and mailbox
 - Microsoft Team
 - Optional Project (Channel)
- A-Z SPFx web part
- May be integrated with CRM

[Teams Provisioning | Envision IT](#)

The 'Site Request' form contains the following fields and controls:

- Division ***: A dropdown menu with 'Leviathan Security Group' selected.
- Site Template ***: A dropdown menu with 'Client Site' selected.
- Title ***: An empty text input field.
- Purpose**: A larger empty text area.
- Alias ***: An empty text input field.
- Public Group**: A toggle switch set to 'Yes'.
- Create Team**: A toggle switch set to 'Yes'.
- Submit** and **Cancel** buttons at the bottom.

The 'Client Sites' page shows a list of sites with a navigation bar containing letters A through K and an ellipsis. Below the list, there is a blurred area representing the site details.

The 'Client Site Request' form contains the following fields and controls:

- Title ***: An empty text input field.
- Alias ***: An empty text input field.
- Secondary Owners**: An empty text input field.
- Submit** and **Cancel** buttons at the bottom.

Migration Tools

ShareGate:
Desktop

[ShareGate Desktop](#)

**SharePoint Online
Migration Tool**

SharePoint Online Migration

- Aligning IA from previous on-prem site structure to Microsoft 365 structure is extremely important
- Teams and SharePoint Online modern site structure
- ShareGate used to manage migration process
- Ideal time to evaluate all content and reorganize, update or prune as appropriate

Purview Retention and Information Protection

Data Lifecycle Management & Records Management

- Data Identification
 - SharePoint, OneDrive, Teams, Exchange
- Data Classification
 - Apply Retention Labels
- Data Protection
 - Retention Policies

Information Protection

- Identify Content
 - Identify Sensitive information Types
- Classify Content
 - Apply Sensitivity Labels
- Protect Content
 - Apply Data Protection Policies
 - Conditional Access Policies
 - Encryption
 - Content Markup (ie: watermark)
 - Rights Management
