

Microsoft Purview Information Protection

Why Information Protection Matters

Sensitive data faces risks of accidental sharing, regulatory violations, and overexposure due to AI, especially without adequate safeguards. As collaboration and automation expand, these risks grow. Microsoft Purview helps mitigate these issues by classifying and protecting information before it is shared, viewed, or misused.

It's not a 'one size fits all' solution

Cybersecurity measures should match the content's sensitivity, as generic protections can leave information vulnerable.

Copilot readiness is a wake-up call

AI tools like Microsoft Copilot analyze your data; it's essential to ensure that only appropriate content is visible and accessible.

Hidden Risks of External Sharing

Sharing data externally without proper controls can lead to exposure, misuse, and compliance violations.

Implement Microsoft Information Protection to help you discover, classify, and protect sensitive information wherever it lives or travels.

Why Choose Envision IT

Envision IT is a trusted Microsoft Solutions Partner with decades of experience in securing Microsoft 365 environments. Our customized Microsoft Purview implementations help classify, protect, and govern sensitive data, integrating it seamlessly into your existing workflows. From risk discovery to optimization, we help organizations master data governance, transforming raw data into actionable insights that ensure compliance and security.

- ✓ Trusted Microsoft Partners since 1997
- ✓ 25+ years of Microsoft 365 expertise
- ✓ 15x Microsoft MVP leadership
- ✓ Purview implementation expert
- ✓ Pioneers in external collaboration and secure sharing

Safeguard Your Data with Expert Purview Implementation Services

With Microsoft Purview, your team can gain greater control over your organization's sensitive information and manage data with confidence. We leverage the advanced features of Microsoft Purview to offer seamless data protection and governance solutions that integrate smoothly into your existing business operations, enabling your teams to collaborate securely and confidently across Microsoft 365.

 Data Discovery & Risk Assessment Identify sensitive content and oversharing across your Microsoft 365 environment.	 Pilot & Rollout Strategy Deploy labels across Teams, SharePoint, Outlook, and more in a phased approach.
 Label & Policy Design Create customized sensitivity labels and protection policies that suit your specific needs.	 User Training & Change Management Equip staff with the knowledge to apply labels and protect data confidently.
 Access Controls & DLP Configuration Enforce encryption, conditional access, and data loss prevention rules.	 Ongoing Support & Optimization Monitor adoption, fine-tune policies, and stay Copilot-ready.

Our Proven 5-Step Roadmap to Protection

Purview Workshops

Align your teams on Purview goals, risks, and capabilities.

Roadmap Planning

Design a clear roadmap with policies, labels, and timelines.

Tenant Discovery

Identify sensitive data and risks using our Tenant Dashboard.

Onboarding & Support

Optimize policies and provide ongoing support and insights.

Strategy Rollout

Deploy Purview and train users with minimal disruption.

Secure Your Data, Unlock Possibility.
